Editor of SOVIET PHYSICS–JETP:
J. GEORGE ADASHKO, 25 WEST 81ST ST., N.Y., N.Y. 10024

Soviet Physics–JETP is a monthly journal published by the American Institute of Physics and contains a complete translation of the *Journal of Experimental and Theoretical Physics* of the U.S.S.R. Academy of Sciences.

This translating and publishing project was undertaken by the institute in the conviction that dissemination of the results of researches everywhere in the world is invaluable to the advancement of science. The U.S. National Science Foundation encouraged the project initially and supplied partial financial support on a declining scale until the AIP translation program became self-supporting in July 1964.

The American Institute of Physics and its translators propose to translate faithfully all the material appearing in the original articles. The views expressed in the translations are therefore those of the original authors, and not those of the translators nor of the American Institute of Physics.

Volume 1 of *Soviet Physics–JETP* corresponds to Russian Volume 28 (1955). Two volumes are published annually, each of six issues. Each volume contains the translation of one volume of the *Journal of Experimental and Theoretical Physics.*

The transliteration of the names of Russian authors follows essentially the standard agreed upon by the British Standards Institute and the American National Standards Institute (Committee Z 39).

Subscription Prices

	U.S. and poss., Canada and Mexico	Europe, Middle East North Africa (air freight)	Elsewhere

Soviet Physics–JETP is a monthly Journal published at Prince and Lemon Streets, Lancaster, Pa. by the American Institute of Physics, Inc. Second Class postage paid at Lancaster, Pa.

new from RUSSIA!

Soviet Journal of Quantum Electronics

SOVIET JOURNAL OF QUANTUM ELECTRONICS

The American Institute of Physics has added to its list of 13 major Russian journals that are translated from cover to cover, the journal *KVANTOVAYA ELEKTRONIKA*. New in 1971, this journal is edited by Academician N.G. Basov, who shared the 1964 Nobel Prize in physics for development of the laser with Charles H. Townes and A. Prokhorov.

This bimonthly journal covers experimental and theoretical work on quantum electronics and its applications in science and technology: lasers, interaction of coherent radiation with matter, holography, nonlinear optics, and related topics. The editors say, "We hope to concentrate, to a significant degree, the fundamental publications on quantum electronics in a single publication."

The importance that the Russians attach to this journal is indicated by the fact that they are printing more than twice as many copies as they print of their famous *ZHURNAL EKSPERIMENTAL'NOI I THEORETICHESKOI FIZIKI*, which we publish as *SOVIET PHYSICS–JETP*.

Volume 1 (July 1971 - June 1972) of *SOVIET JOURNAL OF QUANTUM ELECTRONICS* covers the 1971 issues of *KVANTOVAYA ELEKTRONIKA*.
